

## **ZEOLITE ADVANCES IN PETROLEUM AND ORGANIC CHEMICALS III**

(completed August 2007 – Re-issued November 2007)

*A technical investigation commissioned by the members of the Catalytic Advances Program*

### **CONTENTS**

1.	INTRODUCTION.....	1
2.	ADVANCES IN THE SYNTHESIS AND CHARACTERIZATION OF ZEOLITES AND MESOPOROUS MATERIALS .....	7
2.1	ENTERING THE 21 <sup>ST</sup> CENTURY IN ZEOLITE SCIENCE.....	7
2.2	ADVANCES IN CHARACTERIZATION TECHNIQUES .....	8
2.2.1	Characterizing the Acid Sites in Zeolites.....	12
2.3	NEW DIRECTIONS IN ZEOLITE SYNTHESIS EFFORTS.....	14
2.3.1	Innovations from Chevron .....	15
2.3.2	Innovations from Universidad Politecnica de Valencia.....	15
2.3.3	Survey of the multi-variable Design Space.....	15
2.4	SMALL PORE ZEOLITE SYNTHESIS FOR PETROCHEMICAL APPLICATIONS .....	20
2.4.1	Disordered Materials for MTO .....	20
2.5	THE QUEST FOR THE 18 MEMBER RING ZEOLITE .....	22
2.5.1	Why search for Larger Pore Zeolite Structures?.....	22
2.5.2	Two 18-Member Ring Zeolites Discovered.....	23
2.5.3	SDAs and Very Large Pore Zeolites .....	23
2.5.4	Synthesis and Topology of 18-ring ITQ-33 .....	25
2.5.5	Innovation in Zeolite Synthesis: Automated Parallel Synthesis and High Throughput Screening Methods.....	26
2.5.6	SDA Design for Organic Recycling.....	27
2.6	ADVANCES IN ZEOLITE MEMBRANE SYNTHESIS.....	28
2.7	ADVANCES IN MESOPOROUS MATERIALS—INCREASING THERMAL STABILITY .....	30
2.7.1	Functionalizing Mesoporous Silicas for Catalytic Applications.....	31
2.7.2	Meeting the Challenges in the Synthesis of Mesoporous Materials .....	32
2.7.3	Dendrimer Incorporation to Increase Functionality .....	33

2.8	CRYSTALLINE SEMICONDUCTING POROUS MATERIALS— THE PSEUDO-TO <sub>4</sub> UNITS.....	34
2.8.1	Properties.....	35
2.9	ENGINEERING NEW SUPER-POROUS MATERIALS THROUGH ATIONAL SYNTHESIS.....	35
2.9.1	Rational Design.....	35
2.9.2	Chiral Zeolite-like Materials—Search for the Artificial Enzyme.....	36
2.9.3	Mesoporous Carbon Organic Frameworks .....	36
2.9.4	Zeolitic Imidazolate Frameworks (ZIFs) and Reticular Chemistry .....	38
2.10	WHAT WILL TOMORROW BRING?.....	38
2.11	REFERENCES.....	39
3.	ZEOLITE ADVANCES IN REFINING PROCESSES AND PETROCHEMICALS PRODUCTION.....	45
3.1	DEVELOPMENTS IN FCC CATALYSTS .....	45
3.1.1	Albemarle ADZT-100.....	45
3.1.2	Grace Davison LIBRA.....	46
3.1.3	ExxonMobil/Davison AdVanta.....	46
3.1.4	BASF Catalysts (formerly Engelhard) DMS technology.....	47
3.1.5	Maximizing Olefins Production in FCC .....	48
3.2	OTHER REFINERY PROCESSES.....	54
3.2.1	Alkylation.....	54
3.2.2	Isomerization and Aromatics Saturation.....	57
3.2.3	Dewaxing .....	59
3.2.4	Hydroprocessing/Hydrocracking .....	62
3.2.5	Olefins to Gasoline.....	64
3.2.6	Olefins Production.....	65
3.3	PETROCHEMICALS .....	71
3.3.1	Ethylbenzene Processes.....	71
3.3.2	Ethylbenzene Conversion.....	73
3.3.3	Toluene Disproportionation and Alkylation .....	74
3.3.4	Xylenes Isomerization.....	78
3.3.5	Cumene Processes.....	81
3.3.6	Aromatization.....	81
3.3.7	Methanol to Olefins.....	82
3.4	CONCLUSIONS.....	85
3.5	REFERENCES.....	86
4.	DEVELOPMENTS IN ORGANIC SYNTHESIS WITH ZEOLITES .....	97
4.1	ELECTROPHILIC AROMATIC SUBSTITUTION REACTIONS.....	98
4.1.1	Alkylation Reactions.....	98

4.1.2	Acylation Reactions .....	106
4.1.3	Fries Rearrangement .....	109
4.2	ISOMERIZATION PROCESSES .....	110
4.2.1	Sumitomo Process for Beckmann Rearrangement.....	110
4.2.2	Isomerization of $\alpha$ -pinene Oxide over Acidic Zeolites.....	115
4.3	AMINATION PROCESSES.....	116
4.3.1	Methylamine Synthesis .....	116
4.3.2	Nitto (Mitsubishi Rayon) Process .....	119
4.3.3	Advances in C <sub>2</sub> -C <sub>5</sub> alkylamine Synthesis.....	119
4.4	OXIDATION PROCESSES .....	120
4.4.1	Developments in Oxidation with Titanium-Containing Zeolites .....	121
4.4.2	Developments in Direct Oxidation of Benzene to Phenol .....	126
4.4.3	Other Advances in Oxidation Processes .....	129
4.5	ADVANCES IN MULTIFUNCTIONAL PROCESSES OVER ZEOLITES AND MESOPOROUS MOLECULAR SIEVES.....	133
4.5.1	Menthol Synthesis from Citronellal and Citral over Bifunctional Catalysts .....	133
4.5.2	Cyclohexanone Conversion to $\epsilon$ -caprolactam with O <sub>2</sub> over Microporous AIPOs .....	134
4.6	CONCLUSIONS AND FUTURE TRENDS .....	135
4.7	REFERENCES.....	137
5.	INDEX .....	149

## FIGURES

Figure 1.1	Growth In Zeolite Catalyst Sales 1995 – 2005 (Degnan And Santiesteban, 2007). .....	1
Figure 1.2	Main Zeolite Structures Used In Commercial Catalysts (Degnan And Santiesteban, 2007). .....	2
Figure 1.3	Olefin And Aromatics Processes Based On Zeolite Catalysts (Degnan And Santiesteban, 2007). .....	3
Figure 1.4	Commercial And Emerging Specialty Chemicals Processes Based On Zeolite Catalysts (Degnan And Santiesteban, 2007). .....	4
Figure 2.1	Number Of Known Zeolite Structures By Year (Based On The Number Of Structures Reported In The Atlas Of Zeolite Structures, Initial, Edition 1, Edition 2, Edition 4, And Presently Reported. (IZA Structure Commission (SBU) Website, 2007) .....	9
Figure 2.2	Stacking Layers CHA Topology (Left) And AFI (Right).....	21
Figure 2.3	Unusual Building Unit Of ITQ-33 (Reproduced With Permission Of AAAS) (Corma et al, 2006).....	25

Figure 2.4	Views Of ITQ-33 And Its Intersecting 18 And 10 Ring Pores (Reproduced With Permission Of AAAS). (Corma et al, 2006) .....	26
Figure 2.5	ZSM-5 Channels And Relationship To The Crystal Membrane Orientation (Reproduced With Permission Of AAAS). (Lai, et al, 2003) .....	29
Figure 2.6	ZSM-5 Membrane Performance In Xylene Isomer Separation. Para-Xylene, Ortho-Xylene Permeance, And Mixture Separation Factor (SP) Are Plotted Versus Temperature Of Permeation For Different Orientations Of The Crystal Membrane On The Substrate. (Reproduced With Permission Of AAAS). (Lai, et al, 2003) .....	30
Figure 2.7	Powder XRD Patterns Of (A) Calcined MCM-41 Silica; (B) Calcined MCM-41 After Heating In Boiling Water For 6 Hours; And (C) Calcined SBA-15 After Heating In Boiling Water For 24 Hours. The Pattern In (C) Is Essentially Unchanged From The As-Synthesized SBA-15. (Reproduced With Permission Of AAAS). (Lhao, et al, 1998a) .....	31
Figure 2.8	Cartoon Showing Anionic Surfactants (Left) Used To Induce Evenly Spaced Active Sites Within A Mesoporous Structure (Right).(Yukoi et al., 2006) .....	32
Figure 2.9	Molecular Patterning Scheme For Synthesizing Isolated Amine Groups On Silica (Reproduced With Permission From American Chemical Society) .....	33
Figure 2.10	An Example Of A Dendrimer With Multiple Functional Groups. The Anchors Are First Formed On The Surface Of The Mesopore, Then The Dendrites Are Added To Grow The Branching Catalytic Sites. (Mckittrick And Jones, 2003).....	34
Figure 2.11	Starting From Simple Assemblies And Linking Units, Larger And Larger Building Blocks Combine To Form Crystalline Nanoporous Materials With More Surface Area Than Zeolites (Reproduced With Permission Of AAAS). (Hupp And Poeppelmeier, 2005) .....	36
Figure 2.12	The Two Tetrahedral Sbus (A, Tetra(4-Dihydroxyborylphenyl) Methane, B, Tetra(4-Dihydroxyborylphenyl) Silane And The Linker (C, 2,3,6,7,10,11-Hexahydroxytriphenylene) (El-Kaderi et al., 2007).....	37
Figure 2.13	The Topologies Of Three Low Density All-Organic Porous Frameworks: A. COF-102, B. COF-105, C. COF-108 (El-Kaderi et al., 2007) .....	37
Figure 2.14	The Positions Of The Nitrogen Atoms In The Linkers Determine The ZIF Topology (SOD, RHO, Diamond, LTA) Produced. The Numbering Of The Linkers Is Shown For The Benzimidazolate .....	38
