

# Alternative Energy and Fuels Technology

## Volume 2- Renewables

### A Multi-Client Study

## CONTENTS

SECTION I. INTRODUCTION .....	1
SECTION II. EXECUTIVE SUMMARY .....	11
A. THE CURRENT ENVIRONMENT FOR ENERGY AND FUELS .....	12
B. BENCHMARKING OF ENERGY/FUELS TECHNOLOGY AND INVESTMENT OPPORTUNITY ANALYSIS.....	16
1. Hydro (land and sea).....	19
2. Geothermal .....	20
3. Wind .....	22
4. Solar/Photovoltaic.....	24
5. Biomass, Biofuels And Bioproducts.....	25
C. SUMMARY AND RECOMMENDATIONS .....	26
D. THE ALTERNATIVE ENERGY AND FUELS TECHNOLOGY “VISION” .....	31
SECTION III. ENVIRONMENT/BACKGROUND .....	37
A. THE CURRENT ENVIRONMENT.....	37
B. DRIVERS FOR ALTERNATIVE ENERGY AND FUELS IN THE 21 <sup>ST</sup> CENTURY .....	38
1. Economic Drivers .....	38
2. Strategic Drivers .....	39
3. Environmental Drivers.....	39
4. Market Drivers.....	39

C.	RECENT EVENTS AND DEVELOPMENTS .....	39
SECTION IV. CURRENT STATUS OF ENERGY/FUELS TECHNOLOGY .....		45
A.	HYDROPOWER TECHNOLOGY .....	45
1.	Technology Description .....	46
a.	Basics of Hydropower .....	46
b.	Capacity Factors and Seasonal Flow Variations .....	46
c.	Conventional Hydropower Plants .....	47
d.	Pumped Storage Plants.....	48
e.	Tidal Power Plants .....	49
f.	Small Hydropower Plants.....	49
g.	Turbine Types.....	50
2.	New Hydropower Technology .....	52
a.	Adjustable (Variable) Speed Turbines .....	52
b.	Plant Automation and Water Use Optimization.....	52
c.	Generator Transformers.....	53
d.	Construction Technologies.....	53
3.	Worldwide Resource Potential and Development .....	54
a.	Historical Trends and Forecast of Energy Production from Hydropower .....	56
b.	Regional Potential and Development .....	58
c.	Cost Considerations.....	62
d.	Bottom-Line Costs for New Hydro Generation.....	63
B.	GEOHERMAL .....	65
1.	Types of Geothermal Resources and Applications .....	66
a.	Hydrothermal.....	66
b.	Hot Dry Rock and EGS.....	66
c.	Magma .....	66
d.	Geopressure .....	66
e.	Non-electric .....	67
2.	Limits to the Use of Geothermal Resources .....	67
3.	Market Sizes.....	68

4.	Hydrothermal: Global Geothermal Electricity (by region).....	70
5.	Technologies: Flash and Binary.....	73
	a. Flash Cycle.....	73
	b. Binary Cycle.....	74
	c. Balance of the System and the Operations.....	75
6.	Economics: Marginal Improvement in the Technologies, 1990-2015.....	75
7.	Technical Factors Behind the Economics.....	77
C.	WIND.....	82
	1. Global installations - by region.....	82
	2. Forecasted growth worldwide and by region.....	83
	3. A well-referenced comment on the “state-of-the-art” of the technology today and changes in the last ten years.....	84
	a. Fundamental Concepts of Wind Power Generation.....	84
	b. Technology Progress in Recent Past.....	86
	i. Control concepts.....	86
	ii. Rotor Fabrication.....	89
	c. Offshore technology.....	89
	d. Existing challenges for continued market penetration and increased sales versus alternatives.....	91
	i. Offshore.....	91
	ii. Grid integration.....	91
	iii. Siting.....	92
	iv. Challenges for economic realization in low wind speed regimes.....	93
	4. Historical cost (economics) based on standardized comparisons.....	94
D.	PHOTOVOLTAIC (PV) ENERGY CONVERSION.....	98
	1. World PV Module Production.....	99
	2. Top PV Producers.....	99
	3. Dominant Technologies.....	101
	a. Status and Challenges for Cell Technologies.....	102
	4. World PV Applications by Key Market Sector.....	104
	5. History of PV Module Prices.....	106
	6. Key Findings.....	107

a.	Economics of Grid-Connected PV.....	108
E.	BIOMASS.....	111
1.	Agricultural Feedstocks .....	111
a.	Corn.....	113
i.	Feedstocks .....	113
ii.	Products .....	113
iv.	Co-Products .....	117
b.	Sugarcane .....	117
i.	Feedstocks .....	117
ii.	Products .....	118
iii.	Technologies.....	119
iv.	Co-Products .....	120
c.	Oil seeds.....	120
i.	Feedstocks.....	120
ii.	Products.....	121
iii.	Technologies .....	121
iv.	Co-Products .....	122
2.	Other Feedstocks.....	123
a.	Forest products.....	123
i.	Feedstocks.....	123
ii.	Products/Technologies .....	123
b.	Municipal solid wastes (MSW) and other wastes.....	124
i.	Feedstocks/Products/Technologies .....	124
c.	Agricultural residues .....	124
i.	Feedstocks/Products/Technologies .....	124
3.	Highlights and Conclusions .....	125
SECTION V. TECHNOLOGY DEVELOPMENT, R&D AND OPPORTUNITIES.....		131
A.	HYDROPOWER TECHNOLOGY .....	131
1.	Emerging Technologies .....	131
a.	Streamflow/Kinetic Energy.....	132
i.	Ocean Energy.....	133

ii.	Wave Energy .....	135
iii.	Tidal Energy .....	137
iv.	Ocean Current Energy .....	139
v.	Ocean Thermal Energy Conversion .....	140
vi.	Salinity Power .....	140
b.	R&D Opportunities.....	140
i.	Overview .....	141
ii.	Organizations Engaged in Conventional Hydro R&D .....	143
B.	GEOTHERMAL.....	146
1.	Mineral Recovery.....	147
a.	Salton Sea Geothermal Resource and Mineral Recovery .....	147
b.	Scale Control .....	148
2.	Modular (Wellhead) Geothermal Technology.....	149
3.	Drilling, Fracturing, Treatment and Injection Technologies (and EGS) .....	150
4.	Exploration/Confirmation Techniques .....	151
a.	Slimhole drilling, injection, testing and analysis.....	152
b.	Geophysical and geochemical techniques, and data analysis. ....	152
5.	Power System Enhancements .....	152
6.	Estimates of Investments on Geothermal R&D and Power Projects.....	155
a.	United States.....	155
b.	World.....	156
C.	WIND.....	160
1.	Materials .....	160
a.	Offshore applications .....	160
2.	Components and Subsystems.....	162
a.	Turbine scaling.....	162
b.	Balance of station cost.....	162
c.	Self erecting towers and turbines, and alternative foundations.....	163
d.	Rotor design .....	164
e.	Drive train .....	165
3.	Systems .....	167

a.	Smart Grid Integration.....	167
b.	Increased Power Availability and Predictability.....	168
D.	PHOTOVOLTAIC (PV) ENERGY CONVERSION .....	170
1.	Decrease the Manufacturing Cost of PV Modules to \$1.00 Per Watt .....	170
a.	Single Crystal Silicon.....	170
b.	Poly Crystal Silicon.....	171
c.	Silicon Sheet .....	171
d.	Forecasts of Manufacturing Costs (Existing Production) .....	171
e.	Non Silicon Crystal Products in Production .....	172
f.	Next Generation Products .....	172
g.	Reduce the Installed Cost from \$6.00 - 7.00/Wp to \$3.00/Wp.....	174
2.	Decrease the Cost of Inverters from \$0.50 – 0.60/Watt to \$0.15 – 0.20/Watt.....	174
3.	Increase the Efficiency of PV Cells and Modules Without Increasing Cost.....	175
4.	Impact of Installed Costs of \$3.00-4.00/Watt (DC) on the Economics of PV..	175
a.	Off-Grid Applications .....	175
b.	Grid-Connected Residential PV –New Homes and Retrofit.....	175
c.	PV Installation Forecast for the Next 5-10 Years .....	175
5.	Conclusions.....	176
E.	BIOMASS.....	178
1.	Lignocellulose conversion to sugars followed by fermentation.....	178
a.	Pretreatment Technologies .....	179
b.	Enzyme hydrolysis.....	181
c.	Fermenting microorganisms .....	181
2.	Gasification and conversion of syngas to fuels.....	182
a.	Gasification and P&P Mills.....	182
b.	Fuels from Syngas .....	183
c.	Co-products and integrated biorefineries.....	187
d.	Separations Technologies .....	189
	SECTION VI. COMPETITIVE LANDSCAPE AND FACTORS FOR SUCCESS .....	193
A.	HYDROPOWER TECHNOLOGY .....	193

1.	Stimuli for Development: Higher Energy Prices, Kyoto Protocol.....	193
a.	Technology Readiness.....	193
b.	Country Stability .....	194
c.	Government Policies .....	195
d.	Public Support.....	195
e.	Financing.....	196
B.	GEOTHERMAL.....	197
1.	Definition of Enhanced Geothermal Systems (EGS).....	198
2.	Size of the EGS Resource.....	198
3.	Scope of EGS Technology.....	200
4.	Topics for Investment .....	200
a.	Developing the technology and the measuring/modeling methods for finding and engineering/enhancing “hot dry rock” reservoirs.....	200
b.	Coso (California) .....	201
c.	East Desert Peak (Nevada) .....	201
d.	Soultz-sous-Forets (Rhine Graben, France).....	201
e.	HDR in Australia based on HWR (“wet”) in Japan.....	202
5.	Size of Investment Opportunities .....	202
a.	Industry in the U.S .....	203
b.	Industry Worldwide .....	203
c.	Government Investment.....	203
C.	WIND.....	206
1.	Time horizon and the investment needed to make a difference.....	206
a.	Manufacturers .....	206
b.	Developers .....	207
c.	Financiers.....	208
d.	Policy Drivers .....	208
i.	Overview.....	208
ii.	Current status and future prospects.....	209
2.	Overview of commercial and development projects underway or expected.....	212
D.	PHOTOVOLTAIC (PV) ENERGY CONVERSION.....	213

1.	Summary.....	213
2.	Where are we now? .....	213
3.	What can we expect of PV?.....	214
4.	What can we expect from the advanced research on high efficiency cells? .....	214
5.	What can we forecast for research on low cost thin films? .....	215
6.	What are the limits to PV growth? .....	215
E.	BIOMASS .....	215
1.	Energy Crops .....	216
2.	Metabolic engineering .....	217
3.	Ethanol utilization .....	217
4.	New fuels.....	217
SECTION VII. TECHNOLOGY AND INVESTMENT ANALYSIS.....		219
A.	RENEWABLE CONSIDERATIONS.....	221
1.	Constraints and Challenges .....	223
2.	Renewable Resource Comparison.....	228
3.	Views on Opportunities and Investments.....	230
a.	Resource Infrastructure Development.....	230
b.	Production Enhancement Technologies.....	230
c.	Cross-utilization of Existing and/or New Technologies.....	231
B.	HYDRO (LAND AND SEA).....	232
1.	Technology and Opportunities .....	234
2.	So Where Are the Invesments? .....	235
C.	GEOHERMAL .....	236
1.	Technology /Market Investment Opportunities .....	236
2.	Challenges Leading to Investments.....	239
a.	Resource Assessment and Exploration for Geothermal Power.....	239
b.	Drilling and Stimulation.....	241
c.	Power Systems .....	241
d.	Chemical Advances.....	242
e.	Other Issues.....	242

3.	Where the Investment Opportunities Are.....	243
D.	WIND.....	245
1.	Challenges leading to Investment Opportunities.....	247
2.	Moving Forward.....	249
E.	SOLAR /PV .....	251
1.	The Solar/PV Resource .....	251
2.	Constraints and Opportunities.....	252
3.	Where the Investment Opportunities Are.....	255
F.	BIOMASS, BIOFUELS AND BIOPRODUCTS .....	256
1.	Technology/Market Investment Opportunities.....	256
2.	Further Analysis of Investment Opportunities .....	257
a.	Feedstock Opportunities.....	257
b.	Municipal Solid Waste (MSW).....	257
c.	Black Liquor.....	259
d.	Processing Opportunities.....	260
i.	Biorefineries.....	260
ii.	Next Generation Biodiesel Refineries .....	261
iii.	Other Issues.....	264
3.	Where the Investment Opportunities Are .....	265
G.	SUMMARY AND RECOMMENDATIONS .....	266
SECTION VIII. SUMMARY AND RECOMMENDATIONS .....		271
A.	FACTORS AFFECTING INVESTMENT DECISIONS .....	273
B.	THE FUTURE OF ALTERNATIVE ENERGY AND FUELS .....	277
C.	THE VISION .....	281

## FIGURES

Figure I-1	Perspectives for Identifying “Hot Spots” for Pursuit.....	2
Figure II-1	Intersection of Views for Identifying “Hot” Technologies.....	32
Figure II-2	Order of Magnitude of Energy Resources .....	32
Figure II-3	The “Energyrefinery” Concept .....	34

Figure III-1	Total World Energy Reserve of 32,400 ExaJoules (used in 2000: 350 EJ/a).....	37
Figure III-2	Global Oil Production for Resources of 1800, 2200 and 2600 Billion Barrels .....	38
Figure IV-A-1	Representative configuration for a hydroelectric plant .....	47
Figure IV-A-2	Domains of Applicability for Hydraulic Turbines .....	51
Figure-IV-A-3	Annual Hydroelectric Generation – By Region and World Total.....	57
Figure IV-B-1	Geothermal Power (GWe): 1979-2025 .....	71
Figure IV-B-2	Past and Future Geothermal Electricity: Selected Years 1971-2025 .....	71
Figure IV-B-3	Geothermal Dual Flash Power Generation .....	73
Figure IV-B-4	Geothermal Binary Cycle Power Generation.....	74
Figure IV-B-5	Costs of Geothermal Electricity Generation .....	77
Figure IV-C-1	Installed capacity of wind power by region since 1999 .....	82
Figure IV-C-2	Forecasts of Wind Capacity Growth.....	84
Figure IV-C-3	Blade Horizontal Axis Wind Turbine and components.....	85
Figure IV-C-4	Rotor Diameter and power capacity growth since 1980. Turbine power ratings have increased from 50 kW in 1980 to 3.6MW in 2003 and 5MW in 2010 .....	86
Figure IV-C-5	Tip Speed vs. Diameter.....	87
Figure IV-C-6	Projected Capital costs for offshore wind turbines .....	90
Figure IV-C-7	Average Annual Wind Power for the United States .....	94
Figure IV-C-8	Wind Project Capital Costs History and Projections .....	95
Figure IV-C-9	Levelized Cost of Energy from Wind Power plants as a function of reported capacity factor. ....	96
Figure IV-D-1	PV Module Experience Curve 1975-2004, Price Versus Cumulative Shipments (MW).....	107
Figure IV-E-1	Pathways for fuels and energy from biomass.....	111
Figure IV-E-2	U.S. Ethanol Production.....	114
Figure IV-E-3	Ethanol Spot vs. Retail Gasoline Prices.....	114
Figure IV-E-4	Schematic of ethanol production in corn mills .....	115
Figure IV-E-5	Brazilian Ethanol Trends – Production and Price .....	118
Figure IV-E-6	Brazilian Sugar Cane to Ethanol Process.....	119
Figure IV-E-7	Biodiesel Production Process.....	122
