

FRONTIERS IN CATALYSIS

A technical investigation commissioned by the members of the Catalytic Advances Program

CONTENTS

1.	INTRODUCTION	1
2.	NOVEL NANOMATERIALS IN CATALYSIS.....	3
2.1	INTRODUCTION	3
2.1.1	Overview of Chapter.....	3
2.1.2	Synthesis of Nanomaterials	3
2.1.3	Characterization of Nanomaterials	4
2.1.4	Applications of Nanomaterials	5
2.1.4.1	Catalysis.....	5
2.1.4.2	Fuel cells.....	6
2.1.4.3	Adsorption	7
2.1.4.4	Photocatalysis	9
2.1.4.5	Electrocatalysis	9
2.2	METAL CATALYSTS.....	10
2.2.1	Noble Metal Nanoparticles	10
2.2.2	Multimetallic Nanoparticles	14
2.2.2.1	Core-shell Nanostructures.....	15
2.2.3	Dendrimer Stabilized Nanoparticles.....	15
2.2.4	Nanoclusters in Inverse Micelles.....	16
2.3	METAL OXIDE CATALYSTS	17
2.3.1	Nanocrystalline Metal Oxides	17
2.3.2	Metal Oxide Nanocomposites.....	22
2.4	CARBON NANOTUBES AND NANOFIBERS	23
2.4.1	Multiwall Carbon Nanotubes.....	23
2.4.2	Graphite Nanofibers.....	27
2.5	NANOSTRUCTURED CATALYTIC MEMBRANES.....	31
2.6	METAL SULFIDES AND OTHER SYSTEMS	32
2.7	SUGGESTIONS FOR FUTURE RESEARCH.....	34
2.7.1	Novel Synthetic Methods.....	34
2.7.2	In situ Characterization.....	34
2.7.3	Future Directions	35
2.8	COMMERCIAL NANOMATERIALS WITH APPLICATIONS IN CATALYSIS..	37
2.9	REFERENCES	38

3.	NEW REACTION MEDIA FOR GREEN CHEMISTRY	43
3.1	INTRODUCTION.....	43
3.2	IONIC LIQUIDS	45
3.2.1	Introduction to ionic liquids.....	45
3.2.2	Ionic liquids in Lewis acid catalysis.....	47
3.2.2.1	The Eastman process for 2,5-dihydrofuran synthesis	48
3.2.3	Transition metal catalyzed processes	52
3.2.3.1	The Institut Français Pétrol Difasol process	52
3.2.3.2	Hydroformylation of long chain alkenes in ionic liquids.....	55
3.2.4	Supported ionic liquid catalysis	57
3.2.4.1	Friedel-Crafts reactions using supported ionic liquids.....	57
3.2.4.2	Supported ionic liquids for hydroformylation reactions	58
3.3	SUPERCRITICAL FLUIDS	61
3.3.1	Supercritical Carbon Dioxide as a Reaction Medium.....	63
3.3.1.1	Homogeneous reactions involving scCO ₂ as a solvent.....	63
3.3.1.2	Biphasic reactions involving scCO ₂	67
3.3.1.3	scCO ₂ -solid biphasic mixtures.....	75
3.3.1.4	scCO ₂ with supported metal complex catalysts	76
3.3.1.5	scCO ₂ with supported metal catalysts.....	78
3.3.1.6	Supercritical fluids for coke inhibition	80
3.3.2	Catalysis in supercritical water	81
3.3.2.1	Oxidation of p-xylene to terephthalic acid.....	81
3.4	CONCLUSIONS.....	82
3.5	REFERENCES.....	85
4.	OPERANDO SPECTROSCOPY	93
4.1	INTRODUCTION.....	93
4.2	THE ROLE OF OPERANDO SPECTROSCOPY STUDIES IN CATALYST CHARACTERIZATION	97
4.3	DESIGN OF OPERANDO SPECTROSCOPY CELLS	100
4.3.1	Single-mode operando spectroscopy set-ups	100
4.3.2	Combining multiple operando spectroscopies in one set-up.....	103
4.4	CASE STUDIES IN THE FIELD OF HOMOGENEOUS AND HETEROGENEOUS CATALYSIS.....	108
4.4.1	Homogeneous catalysis.....	108
4.4.2	Heterogeneous catalysis	110
4.4.2.1	Supported metal catalysts.....	110
4.4.2.2	Supported metal oxide catalysts.....	111
4.4.2.3	Zeolites.....	113
4.4.2.4	Bulk metal oxides.....	114
4.5	SCIENTIFIC CHALLENGES IN THE FIELD.....	115

4.6	CONCLUDING REMARKS	115
4.7	APPENDIX - QUESTIONNAIRE RESULTS	117
4.7.1	Prof. James A. Anderson	117
4.7.2	Dr. Miguel A. Bañares	118
4.7.3	Dr. Dominique Bazin	119
4.7.4	Prof. Bjerne S. Clausen	120
4.7.5	Dr. Igor V. Koptuyug	122
4.7.6	Prof. Can Li	124
4.7.7	Dr. Shinichi Matsumoto	125
4.7.8	Prof. Robert J. Meier	126
4.7.9	Dr. Frederic Meunier	127
4.7.10	Dr. Jeff Miller	129
4.7.11	Dr. Guido Mul	130
4.7.12	Dr. Heiko Oosterbeek	132
4.7.13	Prof. S. Ted Oyama	133
4.7.14	Prof. Robert Schoonheydt	134
4.7.15	Prof. Israel E. Wachs	135
4.8	REFERENCES	137
5.	INDEX	143

FIGURES

FIGURE 2.1	Strategies For Preparing I-D Nanomaterials	4
FIGURE 2.2	Growth of nanoparticles at defect sites, 0.17 monolayer of Au on TiO ₂	11
FIGURE 2.3	Mechanism for Catalytic Oxidations Over Pd Nanomaterials	14
FIGURE 2.4	Nano-nail structures of ZnO.	22
FIGURE 2.5	Histogram of metal particle diameters for PtSn/MWNTs	23
FIGURE 2.6	a) Raman spectra of MWNTs; b) The catalytic combustion method for synthesizing MWNTs from PP polymers	25
FIGURE 2.7	Examples of Various Forms of Carbon Nanostructures.	29
FIGURE 2.8	Mechanism of Formation of Methanol over Bifunctional Pt/Ni Catalysts	32
FIGURE 2.9	Activity for catalytic hydrodesulfurization of thiophene, 325 - 375 °C, 24 h for commercial MoS ₂ , sonochemical MoS ₂ , and hollow (50, 150 nm) sonochemically prepared materials	33
FIGURE 3.1	Some of the cations and anions that can be combined to generate ionic liquids.	45
FIGURE 3.2	Biphasic use of an ionic liquid for Lewis acid catalysis. The ionic liquid also acts as the source of the Lewis acid	48
FIGURE 3.3	Simplified schematic diagram of the plant used for DHF synthesis using ionic liquids. The reaction is carried out at 100 °C and the plant has a capacity of 4.5 tonnes per day	50

FIGURE 3.4	The hydroformylation of alkenes.....	55
FIGURE 3.5	Ligands used for the selective hydroformylation of long chain alkenes in ionic liquids	56
FIGURE 3.6	Modified silica support used for supported ionic liquid phase hydroformylation of alkenes	60
FIGURE 3.7	Phase diagram for carbon dioxide, showing the critical parameters, $p_c = 73.8$ bar, $T_c = 31.1$ bar.....	61
FIGURE 3.8	Ligands that have been shown to have enhanced solubility in liquid or scCO ₂ compared with PPh ₃	64
FIGURE 3.9	Example of reactions where the selectivity changes on passing from a biphasic (liquid – gas) system to a monophasic (supercritical phase).	64
FIGURE 3.10	Effect of CO/H ₂ flow rate on continuous flow hydroformylation of 1-octene catalyzed by Rh/[PMIM][Ph ₂ P(3-C ₆ H ₄ SO ₃)] in the [OctMIM][NTf ₂]-scCO ₂ biphasic system	72
FIGURE 3.11	Schematic representation of a process for the hydroformylation of alkenes in which the substrates and products are transported in scCO ₂ , with the catalyst immobilized by dissolving in the steady state mixture of reactants and products that develops during the reaction	74
FIGURE 3.12	Process design for continuous operation with full recycling	75
FIGURE 3.13	Ligand used for the hydroformylation of octane in a continuously flowing supercritical phase	77
FIGURE 3.14	Schematic representation of the Thomas Swan and Co. Ltd. Plant for isophorone hydrogenation	80
FIGURE 4.1	Pictorial representation of the operando approach currently pursued in the field of catalysis. Scientists would like to demystify what is happening in the reactor by making “motion” spectra of a catalyst at work. For this they need a powerful “camera” or operando dream machine, which is unfortunately not yet available.	94
FIGURE 4.2	TEM-EELS micrograph of a Mn-promoted Co/TiO ₂ Fischer-Tropsch catalyst.	95
FIGURE 4.3	Schematic approach for preparing new or better catalysts based on the operando spectroscopy approach. Relevant spectroscopic and catalytic databases should be built up by measuring them together in one catalytic set-up. This should allow to connect the data and built up relevant structure/composition-activity/selectivity relationships. It has the advantage that it also offers insight in the active site and reaction mechanism	98
FIGURE 4.4	Operando UV-Vis-NIR spectroscopy set-up for studying catalytic solids in gas-phase applications.	101
FIGURE 4.5	Operando ESR spectroscopy set-up for studying catalytic solids in gas-phase applications.	101
FIGURE 4.6	The complex catalytic puzzle, including the different operando spectroscopy techniques available to offer each insight in a piece of the puzzle.	104

FIGURE 4.7	(a) Picture of the operando UV-Vis/Raman/XAFS set-up for simultaneously measuring three set of spectra of a catalytic solid in the subsecond regime and (b) Details on the complex cell design to allow such approach.	107
FIGURE 4.8	Reaction scheme for the Co-catalyzed hydroformylation reaction.	109
FIGURE 4.9	Reaction scheme for the decomposition of N ₂ O over Cu-ZSM-5 zeolites. The roles of two key reaction intermediates are illustrated.	112

TABLES

TABLE 2.1	Oxidations with O ₂	12
