

CIRCULARITY IN CHEMICALS

A technical investigation
commissioned by the members of the
Catalytic Advances Program

Client Private
July 2019

The Catalytic Advances Program (CAP)

The Catalytic Advances Program (CAP) is an information resource for research and development organizations in the petroleum, chemical, and polymer industries. By the direction of the member companies (through balloting and other interactive means), the program delivers a range of timely and insightful information and analyses which are accessible exclusively to members and protected by confidentiality agreements. The objective is to provide a technical update on commercially viable advances in catalysis as well as benchmark commercial advances in catalysis and process technology.

Members receive three in-depth **CAP Technical Reports** which are written and peer reviewed by leading scientists and experienced industry professionals in areas selected by the membership (via ballot); weekly *CAP Communications* (delivered via e-mail) which provide the latest updates on technical breakthroughs, commercial events and exclusive development opportunities; and attendance at the **CAP Annual Meeting**.

The **Catalytic Advances Program (CAP)** is available on a membership basis from The Catalyst Group Resources (TCGR). For further details, please contact John J. Murphy at John.J.Murphy@catalystgrp.com or +1.215.628.4447 (x1121).

CONTENTS

EXECUTIVE SUMMARY	xi
1. INTRODUCTION	1
1.1 CONCEPT AND PRINCIPLES.....	1
1.1.1 From Linear to Circular Economy	2
1.1.2 Sustainability and Circularity	3
1.1.3 Circularity and Value Chain.....	4
1.1.4 Impact on Innovation.....	6
1.2 INDUSTRIAL AND SOCIETAL RELEVANCE	7
1.2.1 Benefits (Environmental, Economic, Social).....	7
1.3 REQUIREMENTS IN TERMS OF TECHNOLOGICAL APPROACH AND ENTIRE SYSTEM	9
1.3.1 The Role of Catalysis	9
1.3.2 Industrial Symbiosis and Change of Business Model.....	10
1.3.3 Initiatives on the Topics and Regulatory Framework	10
1.4 FROM VISION TO REALITY WITH RELEVANT SHOWCASES	15
1.5 CONCLUSIONS AND FUTURE PERSPECTIVE.....	21
1.6 AUTHORS AND CONTRIBUTORS.....	22
1.7 REFERENCES	25
2. RECENT DESIGN OF INDUSTRIAL CATALYTIC PROCESSES FOR A CIRCULAR ECONOMY	27
2.1 RE-IMAGINING CHEMICAL PROCESSES FOR A CIRCULAR ECONOMY.....	27
2.2 TYPES OF CATALYTIC PROCESSES THAT CAN BE APPLIED TO A CIRCULAR ECONOMY	29
2.2.1 Processes that Allow Utilization of Current “Waste” as a Feedstock.....	29
2.2.1.1 Carbon Dioxide	30
2.2.1.2 Polyethylene	33
2.2.1.3 Polycarbonates.....	37
2.2.1.4 Polyesters.....	38
2.2.1.5 Phosphorous	40
2.2.1.6 Glycerol.....	40
2.2.2 Processes that Facilitate Circularity via Reversibility.....	42
2.2.2.1 Esterification-hydrolysis	42
2.2.2.2 Dehydrogenation-hydrogenation.....	43

2.2.2.3	Transfer Hydrogenation from Renewable H ₂ -Sources	46
2.2.2.4	Decarbonylation.....	47
2.3	MEETING EMERGING OPPORTUNITIES IN CATALYSIS FOR A CIRCULAR ECONOMY	49
2.3.1	Rational Design of Supported Catalysts	49
2.3.2	Minimizing Hazard of the Process and Functional Materials Produced.....	50
2.3.3	Designing for Biodegradation vs. Design for Circularity	51
2.3.4	Application of Green Chemistry Metrics and Life Cycle Thinking to Avoid Regrettable Process Substitutions	51
2.4	REFERENCES	52
3.	INDUSTRIAL BIOTECHNOLOGY AND ITS ROLE IN CIRCULARITY	61
3.1	INTRODUCTION	61
3.1.1	Concept of Biocatalysis – from Biomass to Chemicals.....	62
3.1.2	Fermentation vs. Conversion with Isolated Enzymes.....	63
3.2	TECHNOLOGICAL ADVANCES	66
3.2.1	Metabolic Pathway Engineering	66
3.2.2	Synthetic Biology - Directed Evolution of Enzymes.....	67
3.2.3	Metagenomics	68
3.2.4	In silico Screening.....	69
3.2.5	Enzyme Immobilization.....	69
3.3	CURRENT R&D AND FUTURE DEVELOPMENT – FROM FEEDSTOCK TO BIOFUELS AND CHEMICALS.....	70
3.3.1	1 st Generation Starch-based and 2 nd Generation Lignocellulosic Biomass-based Biofuels	71
3.3.2	Food supply Chain Waste Consisting of Carbohydrates, Proteins, and Oils.....	74
3.3.3	Lignin Valorization	77
3.3.4	Carbohydrates Replacing Hydrocarbons as Basic Chemicals	80
3.3.5	Syngas Fermentation.....	81
3.3.6	Bio Hydrogen.....	82
3.3.7	Valorization of Bio-based Platform Chemicals	83
3.3.8	Industrial Monomers.....	85
3.3.9	Enzymatic Polyester and Polyamide Production and Degradation.....	86
3.4	METRICS	87
3.5	FUTURE PERSPECTIVES.....	87
3.6	REFERENCES	87

4. CIRCULARITY OF PLASTICS	95
4.1 PROPERTIES AND APPLICATIONS OF PLASTICS	95
4.2 WASTE PLASTICS	99
4.2.1 Generation and Management Options	99
4.2.2 Environmental Impact	101
4.2.3 Mechanical Recycling: Limitations	103
4.2.4 Feedstock Recycling	105
4.3 CHEMICAL DEPOLYMERIZATION	106
4.3.1 Glycolysis	108
4.3.2 Methanolysis	110
4.3.3 Hydrolysis	111
4.3.4 Current Trends	112
4.4 GASIFICATION	113
4.4.1 Introduction	113
4.4.2 Effect of Operating Conditions	116
4.4.3 Commercial Processes	117
4.4.4 Market Trends	119
4.4.5 Co-gasification with Biomass, MSW and Other Feedstocks	121
4.5 PYROLYSIS	122
4.5.1 Pyrolysis Products	122
4.5.1.1 Gases	122
4.5.1.2 Solids	123
4.5.1.3 Waxes	123
4.5.1.4 Oil	124
4.5.2 Catalytic Pyrolysis	128
4.5.2.1 Catalysts	128
4.5.2.2 Processes	129
4.5.3 Co-pyrolysis of Plastics with Other Wastes	130
4.6 HYDROCRACKING	131
4.6.1 Introduction	131
4.6.2 Effect of Operating Conditions	132
4.6.2.1 Catalysts	132
4.6.2.2 Hydrogen Pressure and Temperature	133
4.6.2.3 Type of Plastic	133

4.6.3	Projects and Industrial Facilities	133
4.7	HALOGEN REMOVAL	134
4.7.1	Introduction.....	134
4.7.2	Dehalogenation Processes.....	136
4.7.2.1	Thermal Decomposition.....	136
4.7.2.2	Thermo-catalytic Dehalogenation Using Metal Oxides and Their Mixtures.....	139
4.7.2.3	Thermo-catalytic Dehalogenation Using Acid Catalysts.....	140
4.7.2.4	Catalytic Hydrodehalogenation (HDH) of the Pyrolysis Oil.....	141
4.7.2.5	Hydrothermal Treatment.....	142
4.7.3	Commercial Processes	144
4.8	COMBINED APPROACHES FOR THE CONVERSION OF WASTE PLASTICS	145
4.8.1	Thermal/Catalytic Cracking Followed by Hydroprocessing	145
4.8.2	Two Consecutive Hydroprocessing Technologies.....	145
4.9	CONCLUSIONS AND FUTURE PERSPECTIVES	146
4.10	REFERENCES	148
5.	OPPORTUNITIES FOR CO₂ CIRCULARITY	157
5.1	THE CONCEPT OF CHEMICAL REUSE OF CO ₂	157
5.1.1	Opportunities and Gaps.....	158
5.1.2	The Impact and Benefits	159
5.1.3	How to Quantify Impact	161
5.1.4	The Role of Renewable Energy	162
5.1.5	Business Opportunities	163
5.2	THE ROLE OF CATALYSIS AND NEEDS OF NEW CATALYTIC APPROACHES..	166
5.2.1	Options and Routes	166
5.2.2	Techno-economic Feasibility.....	170
5.3	CASE EXAMPLES AND PROCESSES	171
5.4	RECOMMENDATIONS AND HURDLES.....	173
5.5	CONCLUSIONS.....	176
5.6	REFERENCES	177

Figure 4.14	Formation pathways of PBDDs/PBDFs and PXDDs/PXDFs in thermal processes.	139
Figure 4.15	Hydrothermal processing classification with reference to the pressure-temperature phase diagram of water.	143
Figure 5.1	Overview of CO ₂ conversion routes.	158
Figure 5.2	The five loops' impact on the circulation of molecules. Out of 106 Mt chemicals delivered to customers, up to 60% can be circulated.....	159

Figure 5.3	Circulation volume potential, investment and energy needs by molecule loop.....	160
Figure 5.4	Different circular economy business models in the Value Hill.....	165
Figure 5.5	Two current main routes for CO ₂ -based polymers and related type of catalysts used.....	166
Figure 5.6	CO ₂ -based polymers: route to polyurethane.....	167
Figure 5.7	Possible routes for CO ₂ hydrogenation with incorporation of RES in the process. SNG,substituted natural gas	168
Figure 5.8	A model of CO ₂ circular economy and its impact on the chemical and energy value chain.....	169
Figure 5.9	A summary of organisms capable of assimilating CO ₂ . The scope is further extended, with the advent of enabling technologies such as genetic engineering, metabolic engineering, system and synthetic biology, and protein engineering....	170
Figure 5.10	Methanol production from top gases compared with reference case	172
Figure 5.11	a) Overview of the evaluation of synthesis products in the three categories and b) overview of the final evaluation of the predefined synthesis products based on equally distributed weighting of the three categories.....	173
Figure 5.12	Carbon2Chem process concept for the conversion of steel mill gases to methanol	174
Figure 6.1	Definition and context of resource potentials.....	182
Figure 6.2	Potential revenue of the products identified in the present review per dry weight (dw) organic fraction municipal solid waste (OFMSW) (Euro/tonnes OFMSWDW). Prices considered are: 4.2 €/kg PHA (same price assumed for PHB), 5.04 €/kg PLA, 10 4.2 €/kg H ₂ , 4.71E-12 €/spore, 0.04788 €/U Glocoamylase 0.013 €/U Cellulase (same price assumed for Xylanase).....	184
Figure 6.3	Schematic model of acidogenesis for bioenergy and carboxylate platform for bioproducts applications (1st primary; 2nd secondary)	184
Figure 6.4	Main features of a biowaste biorefinery based on biological processing (*normally not feasible when waste is the feedstock).....	185
Figure 6.5	Versatility of syngas intermediate for chemical and fuels production. WGS: water gas shift; FT: Fischer–Tropsch process; FTO: Fischer– Tropsch to Olefins; ferment: gas fermentation; methat.: metathesis process; catal.: catalytic process; DME. dimethyl ether; SNG: substituted natural gas.....	186
Figure 6.6	Simplified scheme of the Enerkem waste-to-methanol plant from MSW	187
Figure 6.7	(a) HT converter for waste-to-chemical plant with indications of different reaction zones and of the temperature profile. (b) Unit of HT gasification and related purification section	188
Figure 6.8	Comparison of methane input and CO ₂ emissions between the conventional urea process and the waste-to-urea technology. For the latter, the net impact is considered, for example, the methane input and CO ₂ emissions associated to produce the same amount of electrical energy obtained in RdF waste-to-energy process.	189

Figure 6.9	Block diagram for a 300 t/d WtM (waste to methanol) plant	193
Figure 6.10	Block Diagram for the hybrid RDF/Natural gas to methanol.....	194

SCHEMES

Scheme 2.1	Safer and functional chemical design informing development of catalytic processes for a circular economy.....	28
Scheme 2.2	Production of formic acid from CO and water.....	31
Scheme 2.3	Transfer hydrogenation of carbon dioxide and bicarbonate from glycerol under aqueous conditions.....	33
Scheme 2.4	Sequence for converting CO ₂ to methanol using three homogeneous catalysts.....	33
Scheme 2.5	Dehydrogenation of polyethylene as a strategy to conversion to fuels and chemicals.....	36
Scheme 2.6	Metal-Catalyzed Hydroxylation of Polyolefins: (a) Rh-catalyzed borylation/oxidation reaction (Kondo, et al., 2002) (b) Mn-catalyzed hydroxylation (Boaen & Hillmyer, 2003) (c) Ni-catalyzed hydroxylation	36
Scheme 2.7	Acceptorless alkane dehydrogenation catalysts consisting of homogeneous pincer-ligated iridium complexes	37
Scheme 2.8	Depolymerization of PET to make through glycolysis, alcoholysis and aminolysis.....	39
Scheme 2.9	Depolymerisation and repolymerization of PET.....	39
Scheme 2.10	Route from phosphoric acid to a useful P(III) intermediate, bis(trichlorosilyl)phosphide anion	40
Scheme 2.11	Alcohol dehydrogenation as functionalization strategy.....	44
Scheme 2.12	Diol polycondensation.....	45
Scheme 2.13	Reversible (a) acceptorless dehydrogenation of secondary amines and (b) transamination of primary amines to secondary imines.....	45
Scheme 2.14	Salient examples of catalysts for of imine-selective oxidative transamination of primary amines.....	46
Scheme 2.15	Catalytic transfer hydrogenation of ketones, imines and olefins from glycerol.....	47
Scheme 2.16	Reversible catalytic decarbonylation and carbonylation.....	48
Scheme 2.17	Decarbonylation of biomass-derived substrates (a) furfural and (b) 5-hydroxymethylfurfural (HMF).....	48
Scheme 2.18	Salient examples of heterogeneous catalysts for HMF decarbonylation.....	49

TABLES

Table 1.1	Examples of Existing Initiatives Measuring or Relevant to Circular Economy	12
Table 1.2	Circularity by Design (limited to some examples). IA = Innovation Action; RIA = Research Innovation Action	16
Table 1.3	Criteria for Circularity	18
Table 1.4	Principles for Circularity	20
Table 2.1	Calculated free energies of reaction (ΔG°_{aq}) for the CO ₂ direct hydrogenation and transfer hydrogenation (Gaussian16, G3B3, PCM water). ^a Reaction includes carbonate base, and was calculated as-stated	32
Table 2.2	Composition of the volatile hydrocarbons in the cracking of polyethylene.....	34
Table 3.1	Classification of enzymes based on the International Union of Biochemistry and Molecular Biology - (IUBMB, 2019).....	64
Table 3.2	Annual World Fuel Ethanol Production (Mil. Gal.).....	71
Table 3.3	Food supply chain waste - main feedstocks, pretreatment, process and products ...	75
Table 3.4	The main possible future applications of lignins.....	80
Table 4.1	Main commercial plastic resins, ordered according to the plastic converted demand in Europe (EU28+NO/CH).....	98
Table 4.2	Reactions involved in plastics waste gasification	115
Table 4.3	Main oil components from the pyrolysis of plastics	125
Table 4.4	Demonstration and commercial plants available for plastic wastes pyrolysis	127
Table 4.5	Commercial plants available for catalytic pyrolysis of plastic wastes	130
Table 4.6	Hydrocracking projects status at the end of 1999 for plastic hydrocracking processes.....	134
Table 4.7	Major additives for PVC products.....	137
Table 4.8	PVC content limitation in feedstocks to most advanced pyrolysis and depolymerization process developments.....	144
Table 6.1	State of the art biowaste biorefinery concepts applying organic fraction municipal solid waste (OFMSW) as feedstock. The valorisation efficiency is provided for the main products. When not provided in the study, it was estimated if applicable. The valorisation efficiency is expressed as follows: for bioplastics in mass produced per input OFMSWDW (g/kg dw), for biopesticides in colony forming units per input OFMSWDW (CFU/kg dw), and for enzymes in maximum enzymatic activity per input OFMSWDW (U/kg dw).....	183
Table 6.2	Cost of production of various chemicals via the waste-to-chemical concept.	189
Table 6.3	Chemical composition and variation range of syngas at the outlet of the HT conversion unit	192
