

## RECENT PROGRESS IN ZEOLITIC MEMBRANES FOR GAS SEPARATIONS AND CATALYSIS

A technical investigation  
commissioned by the members of the  
Catalytic Advances Program

### The Catalytic Advances Program (CAP)

The **Catalytic Advances Program (CAP)** is an information resource for research and development organizations in the petroleum, chemical, and polymer industries. By the direction of the member companies (through balloting and other interactive means), the program delivers a range of timely and insightful information and analyses which are accessible exclusively to members and protected by confidentiality agreements. The objective is to provide a technical update on commercially viable advances in catalysis as well as benchmark commercial advances in catalysis and process technology.

Members receive three in-depth **CAP Technical Reports** which are written and peer reviewed by leading scientists and experienced industry professionals in areas selected by the membership (via ballot); weekly *CAP Communications* (delivered via e-mail) which provide the latest updates on technical breakthroughs, commercial events and exclusive development opportunities; and attendance at the **CAP Annual Meeting**.

The **Catalytic Advances Program (CAP)** is available on a membership basis from The Catalyst Group Resources (TCGR). For further details, please contact Matthew A. Colquitt at [Matthew.A.Colquitt@catalystgrp.com](mailto:Matthew.A.Colquitt@catalystgrp.com) or +1.215.628.4447 (x1130).
